## DETAILED ACTION

### *Examiner's Statement of Reasons for Allowance*

1. Claims 10-13 and 20-29 are allowed over prior art.
2. This action is in reply to applicant's correspondence of 21 December 2006.
3. The following is an examiner's statement of reasons for the indication of allowable claimed subject matter.
4. As per claims 10, 13 and 20-29 generally, prior art of record, Kargl, Frank, et al, "Protecting Web Servers from Distributed Denial of Service Attacks", Univ. of Ulm, 5/1/2001, entire document, <http://www10.org/cdrom/papers/409/>, ("Kargl"), fails to teach alone, or in combination, other than via hindsight, at the time of the invention, the features as discussed and remarked upon in the response of 12/21/2006 to office action of 8/21/2006.

Specifically, (as per claim 10, for example) prior art dealing with Web applications penetration testing, whereas client/server Web services/applications testing for compromise (i.e., authentication/access control to Web services via traditional input validation/scripting techniques, remote services and blackbox/whitebox functionality exorcising, etc.), is generally known to exist per se, (i.e., Melbourne, J., et al, 'Penetration Testing for Web Applications (Parts One-Three)', SecurityFocus, 2003-06-16, entire document, <http://www.securityfocus.com/infocus/1704,...1709,...1722>).

Nowhere in the prior art is found collectively the *italicized* claim elements (i.e., specific use of [embodied software agent based] system-calls proxy servers executing system calls and a virtual machine executing [received/routed] script[s] for the penetration testing of a target computer

network target host), at the time of the invention; serving to patentably distinguish the invention from said prior art;

“10. An agent embodied in a computer-readable medium for use in a system for performing penetration testing of a target computer network having a target host, the agent comprising:

a *system-calls proxy server* configured to

receive and *execute system calls* received via a network; and

a *virtual machine* configured to

*execute scripting language instructions* received via the network;

wherein

the *system calls received via the network are routed to*

*the system-calls proxy server* and

the *scripting language instructions received via the network are routed to*

*the virtual machine.”*

5. Dependent claims 11 and 12 are allowable by virtue of their dependencies.

*Conclusion*

6. Any inquiry concerning this communication or earlier communications from examiner should be directed to Ronald Baum, whose telephone number is (571) 272-3861, and whose unofficial Fax number is (571) 273-3861 and unofficial email is Ronald.baum@uspto.gov.
